ENERGY MANAGEMENT POLICY

Perfektüp Ambalaj San. ve Tic. A.Ş. aims to continuously improve its energy performance and make it environmentally and economically sustainable during all its activities and services in Topkapı Aluminium Tube, Laminated Tube, Topkapı Aerosol and Hadımköy Aerosol factories with the awareness of carrying the responsibility of Energy Management System. In order to realise this goal, Perfektüp Ambalaj San. ve Tic. A.Ş;

- To use the available energy resources in the most efficient way with the full participation and support of our employees, to ensure efficient energy use without compromising comfort and production, and to continuously improve energy performance in line with the 'Sustainable Development' approach,
- To research, implement and ensure the continuity of greenhouse gas emission reduction methods with the understanding of the lowest environmental impact,
- To implement, continuously review and improve the energy management system by integrating it into corporate governance practices,
- To follow new technologies and research alternative energy sources by making use of all kinds of information and resources in order to increase energy efficiency and make it sustainable in the production, transmission, distribution and consumption stages of energy,
- Organisation and review of energy targets and objectives,
- To organise the necessary training programmes to improve energy awareness throughout the organisation, to provide the necessary information, documents and resources for these activities and to play an active role,
- To comply with national legislation and laws, regulations, mandatory standards and other requirements,
- To communicate effectively with customers, authorities, stakeholders and subcontractors to create shared value and beneficial results on Energy Management related issues,

We are committed to ensuring that energy-efficient products, equipment and services are selected in accordance with energy efficiency in the procurement of energy-efficient products, equipment and services and in design issues with the aim of improving energy performance.

- To improve the competences of our employees regarding the energy management system and to ensure their effective participation in the system,

- To unconditionally comply with national and international legislation and regulations, standards and other compliance obligations for which we are responsible,
- To communicate effectively with our customers, suppliers, employees and other stakeholders to create shared value and beneficial results on energy management related issues,
- To prioritise environmental and energy efficiency in our new products and new processes we will develop in the future,
- In our design and procurement processes that affect our energy efficiency, we are committed to ensuring that energy-efficient choices and arrangements are made with the aim of improving energy performance.

CHAIRMAN OF THE BOARD
